PIZZA SALES PERFORMANCE REPORT

2016 Annual Business Analysis

AUTHOR	DATE	DATA PERIOD
Mahesh Chauhan	March 2026	Jan 2016 — Dec 2016

TOOLS USED
Snowflake | Apache Airflow | Python | SQL | Power BI

1. Executive Summary

This report presents a comprehensive analysis of pizza sales data for the year 2016. The analysis was conducted on a fully engineered data pipeline built using Apache Airflow and Snowflake, following a Star Schema data model. The goal was to extract meaningful business insights from raw transactional data to support strategic decision making.

The business generated **$817,860 in total revenue** from **21,350 orders** across 2016, selling **49,574 pizzas** with an average order value of **$38.31**.

2. Business Overview

Metric	Value	Metric	Value
Total Revenue	$817,860	Avg Order Value	$38.31
Total Orders	21,350	Avg Pizza Price	$16.50
Total Pizzas Sold	49,574	Avg Pizzas / Order	2
Weekday Revenue	$710,530 (87%)	Weekend Revenue	$107,329 (13%)

Key Takeaway: Revenue is driven by consistent order volume rather than high spending per order. Customers spend approximately $38 per visit, positioning this business in the mid-range pizza market. The stable order volume suggests a loyal, recurring customer base.

Month	Revenue	Month	Revenue
July (Best)	$72,557	October (Worst)	$64,027

3. Time Intelligence Analysis

3.1 Monthly Performance

May	$71,402	December	$64,701
March	$70,397	September	$64,180

Insight: Revenue is remarkably consistent throughout the year with only an $8,530 gap between best and worst months — a sign of a **stable, healthy business**. December underperforming despite the holiday season suggests competition from restaurants during festive periods.

3.2 Quarterly Performance

Quarter	Revenue	Performance
Q2 (Apr-Jun)	$208,369	Strongest
Q1 (Jan-Mar)	$205,350	2nd
Q3 (Jul-Sep)	$205,016	3rd
Q4 (Oct-Dec)	$199,124	Weakest

Insight: Q2 leads driven by spring and early summer demand. Q4 is weakest — targeted holiday promotions in October-December could significantly boost annual revenue.

3.3 Daily & Hourly Performance

Day	Revenue	Orders
Friday (Best)	$136,073	3,538
Thursday	$123,528	3,239
Saturday	$123,182	3,158
Sunday (Worst)	$99,203	2,624

Peak Hour: 12PM — Lunch rush drives the highest order volume. Friday dominates due to classic end-of-week treat behavior. Sunday is weakest suggesting customers prefer home cooking.

3.4 Weekday vs Weekend

Type	Revenue	% Share	Interpretation
Weekday	$710,530	87%	Corporate lunch / Office crowd
Weekend	$107,329	13%	Underperforming — opportunity

Recommendation: Launch weekend family combo deals and Saturday/Sunday promotions to capture untapped weekend demand. Even a 5% shift could add $35K+ in annual revenue.

4. Product Intelligence Analysis

4.1 Revenue by Category

Category	Revenue	% Share	Orders
Classic	$220,053	26.91%	10,859
Supreme	$208,197	25.46%	9,085
Chicken	$195,919	23.96%	8,536
Veggie	$193,690	23.68%	8,941

Insight: All four categories are remarkably balanced with only a 3.23% gap. This indicates a **well-diversified menu** with no single category dominating.

4.2 Revenue by Size

Size	Revenue	% Share
Large (L)	$375,318	45.89%
Medium (M)	$249,382	30.49%
Small (S)	$178,076	21.77%
XL	$14,076	1.72%
XXL	$1,006	0.12%

Insight: Large pizzas contribute nearly **46% of total revenue**. XL and XXL are significantly underperforming (combined 1.84%) and should be evaluated for discontinuation.

4.3 Top 10 Pizzas by Revenue

Rank	Pizza Name	Revenue
1	The Thai Chicken Pizza	$43,434
2	The Barbecue Chicken Pizza	$42,768
3	The California Chicken Pizza	$41,409
4	The Classic Deluxe Pizza	$38,180
5	The Spicy Italian Pizza	$34,831
6	The Southwest Chicken Pizza	$34,705
7	The Italian Supreme Pizza	$33,476
8	The Hawaiian Pizza	$32,273

9	The Four Cheese Pizza	$32,265
10	The Sicilian Pizza	$30,940

Insight: Chicken pizzas dominate the top 3 — Thai Chicken, BBQ Chicken and California Chicken together generate **$127,611 (15.6% of total revenue)**. Strong signal to expand chicken range.

4.4 Bottom 5 Pizzas by Revenue

Rank	Pizza Name	Revenue
Last	The Brie Carre Pizza	$11,588
2nd Last	The Green Garden Pizza	$13,955
3rd Last	The Spinach Supreme Pizza	$15,277
4th Last	The Mediterranean Pizza	$15,360
5th Last	The Spinach Pesto Pizza	$15,596

Insight: Bottom performers are predominantly veggie and specialty pizzas. Brie Carre generates only 26% of what the top pizza earns — a strong case for menu optimization.

5. Pareto Analysis (80/20 Rule)

Pizza Count	Cumulative Revenue %	Observation
Top 5 pizzas	24.53%	Strong starters
Top 10 pizzas	44.54%	Less than half
Top 21 pizzas	78.91%	Nearly 80%
Top 22 pizzas	81.21%	Crosses 80% mark
All 32 pizzas	100%	Full menu

Insight: The classic 80/20 Pareto rule does NOT apply here. The business needs **22 out of 32 pizzas** to reach 80% revenue — revenue is evenly distributed. While this shows menu diversity, it also means there is **no hero product** driving disproportionate revenue.

6. Key Business Recommendations

#	Recommendation	Priority
1	Launch weekend promotions — family combos & Saturday/Sunday deals	HIGH
2	Expand chicken pizza range — top 3 revenue drivers are all chicken	HIGH
3	Discontinue or rebrand XL/XXL — only 1.84% of total revenue	MEDIUM
4	Run Q4 holiday campaigns — weakest quarter needs a revenue boost	HIGH

5	Remove or promote bottom 5 pizzas — especially Brie Carre	MEDIUM
6	Leverage 12PM peak — lunch deals and office catering packages	HIGH
7	Introduce a hero/signature pizza to anchor brand identity	HIGH

7. Conclusion

The pizza business demonstrates **strong operational stability** with consistent revenue across all months, quarters and product categories. The primary growth opportunities lie in:

- Capturing weekend demand — currently only 13% of total revenue
- Optimizing the menu by focusing on high-performing chicken pizzas
- Creating targeted promotions during Q4 and other weak periods
- Developing a signature hero product to anchor brand identity
- Leveraging the strong 12PM lunch peak with office catering packages
