

PIZZA SALES PERFORMANCE REPORT

2015 Annual Business Analysis

AUTHOR	DATA PERIOD
Mahesh Chauhan	Jan 2015 — Dec 2015

TOOLS USED

Snowflake | Apache Airflow | dbt | Python | SQL | Power BI

1. Executive Summary

This report presents a comprehensive analysis of pizza sales data for the year 2015. The analysis was conducted on a fully engineered data pipeline built using Apache Airflow, dbt, and Snowflake, following a Star Schema data model. The goal was to extract meaningful business insights from raw transactional data to support strategic decision making.

The business generated \$817,860 in total revenue from 21,350 orders across 2015, selling 49,574 pizzas with an average order value of \$38.31.

2. Business Overview

Metric	Value	Metric	Value
Total Revenue	\$817,860	Avg Order Value	\$38.31
Total Orders	21,350	Avg Pizza Price	\$16.50
Total Pizzas Sold	49,574	Avg Pizzas / Order	2
Weekday Revenue	\$710,530 (87%)	Weekend Revenue	\$107,329 (13%)

Key Takeaway: Revenue is driven by consistent order volume rather than high spending per order. Customers spend approximately \$38 per visit, positioning this business in the mid-range pizza market. The stable order volume suggests a loyal, recurring customer base.

3. Time Intelligence Analysis

3.1 Monthly Performance

Month	Revenue	Month	Revenue
July (Best)	\$72,557	October (Worst)	\$64,027
May	\$71,402	December	\$64,701
March	\$70,397	September	\$64,180

Insight: Revenue is remarkably consistent throughout the year with only an \$8,530 gap between best and worst months — a sign of a stable, healthy business. December underperforming despite the holiday season suggests competition from restaurants during festive periods.

3.2 Quarterly Performance

Quarter	Revenue	Performance
Q2 (Apr-Jun)	\$208,369	Strongest
Q1 (Jan-Mar)	\$205,350	2nd
Q3 (Jul-Sep)	\$205,016	3rd
Q4 (Oct-Dec)	\$199,124	Weakest

Insight: Q2 leads driven by spring and early summer demand. Q4 is weakest — targeted holiday promotions in October-December could significantly boost annual revenue.

3.3 Daily & Hourly Performance

Day	Revenue	Orders
Friday (Best)	\$136,073	3,538
Thursday	\$123,528	3,239
Saturday	\$123,182	3,158
Sunday (Worst)	\$99,203	2,624

Peak Hour: 12PM — Lunch rush drives the highest order volume. Friday dominates due to classic end-of-week treat behavior. Sunday is weakest suggesting customers prefer home cooking.

3.4 Weekday vs Weekend

Type	Revenue	% Share	Interpretation
Weekday	\$710,530	87%	Corporate lunch / Office crowd
Weekend	\$107,329	13%	Underperforming — opportunity

Recommendation: Launch weekend family combo deals and Saturday/Sunday promotions to capture untapped weekend demand. Even a 5% shift could add \$35K+ in annual revenue.

4. Product Intelligence Analysis

4.1 Revenue by Category

Category	Revenue	% Share	Orders
Classic	\$220,053	26.91%	10,859
Supreme	\$208,197	25.46%	9,085
Chicken	\$195,919	23.96%	8,536
Veggie	\$193,690	23.68%	8,941

Insight: All four categories are remarkably balanced with only a 3.23% gap. This indicates a well-diversified menu with no single category dominating.

4.2 Revenue by Size

Size	Revenue	% Share
Large (L)	\$375,318	45.89%
Medium (M)	\$249,382	30.49%
Small (S)	\$178,076	21.77%
XL	\$14,076	1.72%
XXL	\$1,006	0.12%

Insight: Large pizzas contribute nearly 46% of total revenue. XL and XXL are significantly underperforming (combined 1.84%) and should be evaluated for discontinuation.

4.3 Top 10 Pizzas by Revenue

Rank	Pizza Name	Revenue
1	The Thai Chicken Pizza	\$43,434
2	The Barbecue Chicken Pizza	\$42,768
3	The California Chicken Pizza	\$41,409
4	The Classic Deluxe Pizza	\$38,180
5	The Spicy Italian Pizza	\$34,831
6	The Southwest Chicken Pizza	\$34,705
7	The Italian Supreme Pizza	\$33,476
8	The Hawaiian Pizza	\$32,273
9	The Four Cheese Pizza	\$32,265
10	The Sicilian Pizza	\$30,940

Insight: Chicken pizzas dominate the top 3 — Thai Chicken, BBQ Chicken and California Chicken together generate \$127,611 (15.6% of total revenue). Strong signal to expand chicken range.

4.4 Bottom 5 Pizzas by Revenue

Rank	Pizza Name	Revenue
Last	The Brie Carre Pizza	\$11,588
2nd Last	The Green Garden Pizza	\$13,955
3rd Last	The Spinach Supreme Pizza	\$15,277
4th Last	The Mediterranean Pizza	\$15,360
5th Last	The Spinach Pesto Pizza	\$15,596

Insight: Bottom performers are predominantly veggie and specialty pizzas. Brie Carre generates only 26% of what the top pizza earns — a strong case for menu optimization.

5. Pareto Analysis (80/20 Rule)

Pizza Count	Cumulative Revenue %	Observation
Top 5 pizzas	24.53%	Strong starters
Top 10 pizzas	44.54%	Less than half
Top 21 pizzas	78.91%	Nearly 80%
Top 22 pizzas	81.21%	Crosses 80% mark
All 32 pizzas	100%	Full menu

Insight: The classic 80/20 Pareto rule does NOT apply here. The business needs 22 out of 32 pizzas to reach 80% revenue — revenue is evenly distributed. While this shows menu diversity, it also means there is no hero product driving disproportionate revenue.

6. Key Business Recommendations

#	Recommendation	Priority
1	Launch weekend promotions — family combos & Saturday/Sunday deals	HIGH
2	Expand chicken pizza range — top 3 revenue drivers are all chicken	HIGH
3	Discontinue or rebrand XL/XXL — only 1.84% of total revenue	MEDIUM
4	Run Q4 holiday campaigns — weakest quarter needs a revenue boost	HIGH
5	Remove or promote bottom 5 pizzas — especially Brie Carre	MEDIUM
6	Leverage 12PM peak — lunch deals and office catering packages	HIGH
7	Introduce a hero/signature pizza to anchor brand identity	HIGH

7. Conclusion

The pizza business demonstrates strong operational stability with consistent revenue across all months, quarters and product categories. The primary growth opportunities lie in:

- Capturing weekend demand — currently only 13% of total revenue
- Optimizing the menu by focusing on high-performing chicken pizzas
- Creating targeted promotions during Q4 and other weak periods
- Developing a signature hero product to anchor brand identity
- Leveraging the strong 12PM lunch peak with office catering packages

"Data without insight is just numbers.

This analysis transforms 2015 pizza sales data into actionable business strategy."

— Mahesh Chauhan
